

# THORNE

Only the best for you, your clients,  
and the environment. Only Thorne.

## Why Thorne?

*Because we believe that "good health" can always be made better. That no one should be limited by a definition of health that's anything less than optimal.*

## Sourcing exceptional ingredients

***We develop better standards for higher quality ingredients.***

Thorne cares deeply about where our ingredients come from. We partner only with suppliers whose practices emphasize quality, science, and responsibility. Better ingredients means better potency, absorption, and digestibility – and ultimately better health.

## Manufacturing the right way

***We manufacture our own products to ensure complete supply chain transparency. An unparalleled commitment to quality throughout our entire manufacturing process.***

We know that many other brands don't take the necessary steps to ensure their products meet the most rigorous standards. So, we do. We invest extensively to make sure we own every step of the manufacturing process.

## Four rounds of testing

***We have two state-of-the-art, in-house laboratories that enable us to conduct four rounds of testing, while most of our competitors test only once or twice.***

Round 1: Raw materials and components, Round 2: In-process testing, Round 3: Finished product testing, and Round 4: Stability testing.

## Sustainable Thinking

***Thorne believes the environment should never be compromised for the sake of business gain. At Thorne, doing our part to protect the environment and its resources goes hand-in-hand with our quality standards.***

1. Technologies – To make a game-changing impact on reducing our carbon footprint, we invested in R&D and produced a new technology to deliver supplements. Out of this effort we launched Effusio by Thorne a revolutionary line of dissolvable supplement discs. Effusio products reimagine the way supplements are delivered and packaged – eliminating the reliance on plastic.
2. Ingredients – Protecting endangered botanical resources is how we source ingredients in a responsible way that is protective of our environment. We take pride in being a steward of the botanical ingredients we use in our products, and will not use endangered botanicals or sources.
3. Shipping – Paperless “pick, pack, and ship” has essentially eliminated our use of paper and ink toner when processing customer orders. From our shipping boxes to the paper, fill-air pillows, and padded packs inside them, nearly all of our shipping supplies are made from recycled materials.
